

# DevOps Engineer

## ABOUT US

We are a creative technology company dedicated to building relevant digital products. As a partner to mostly clients from EU, we help businesses update and improve existing products in response to new opportunities and ever-evolving market needs. Our headquarters are based in Maribor, Slovenia with business development, sales and collaborative client support experts who help clients define the development requirements and business-oriented functional tests.

Our teams deliver software solutions with the best in class methods in agile development. The development team is composed of a number of agile teams with an ever-expanding portfolio of skills. We believe in DevOps principles, infrastructure and test automation and continuous delivery. Our autonomous self-organizing agile teams deliver products reliably with high quality and in time. We combine disciplined front and back end software development practices with the right amount of architectural planning.

## THE ROLE

The DevOps Engineer role at our company is very important and crucial to the smooth running of the business, software development and operations and you will be expected to be an integral part of these divisions. You will be supporting and continuously improving infrastructure and application standards, as well as security design and implementation. You will play a key part in operations automation as well as environment and applications/solutions provisioning, deployment and testing.

We run production and internal systems in cloud as well as hybrid environments. If you can challenge existing infrastructure and development practices, promote excellence and continuously improve deployment and security standards, then this is for you!

## EXPERIENCE & SKILLS

- Excellent C# skills
- Good knowledge of .NET ecosystem
- Good OO skills and knowledge of OO and SOLID design principles
- Good understanding of TDD and BDD principles
- Experience of working in an Agile development environment
- Desired experience with CI/CD (GitHub, TeamCity)
- Desired experience with Git
- Desired experience with AWS or other cloud platforms

## CORE TECHNOLOGIES

- C#, ASP.NET, WebAPI
- JavaScript, NodeJS, Angular, React
- NUnit/SpecFlow/Karma/Mocha/Jasmine or other testing framework
- AWS cloud-first development
- Relational and NoSql databases (MS SQL, MySQL, DynamoDB)
